

Appendix — Market context & contractor economics (one page)

For Fixxly Head of Product assignment · Part 1 · Pre-launch · Bangalore · Competitor: HomeRun

1. Market size (India → Fixxly)

Layer	Indicative size	Note
TAM — construction materials	~\$27B (2024), ~7.5% CAGR	National materials market
TAM — infra + real estate construction spend	~\$265–285B (2023)	Industrial B2B subset
SAM — urgent trade materials, metro (e.g. Bangalore)	Order-of-magnitude ₹ thousands of Cr GMV; capturable share low early	Speed + small baskets to mistri/plumber
SOM — Fixxly (assignment)	3 stores x ~60 OPD → ~180 orders/day (~₹13 Cr/yr GMV at ₹2k AOV); target 150 OPD/store	Growth = repeat x OPD, not national TAM

Sources: industry reports (MRFR, Arisinfra B2B), assignment context.

2. Who is the contractor & who pays?

- **Buyer on app:** plumber / mistri / small civil contractor (urban, hired-work crews).
- **Payer of materials:** often the **homeowner or builder** (material + labour quote); contractor **procures on behalf**.
- **Not core ICP v1:** large developers / project procurement (B2B credit platforms: Infra.Market, 1Supply, Buildigo).

Workforce context: ~10.3 lakh informal construction establishments (~3.8L urban); ~4.2M plumbers incl. informal (~90% without formal training). Fixxly serves **urban trade buyers**, not the full construction long tail.

3. Job types — why “urgent repeat” > “next phase” for launch

No national stat splits jobs by duration; model below uses plumbing/repair proxies and renovation cost data.

Job type	Typical duration	~Share of material trips	~Share of material ₹	Best retention mechanic
Emergency repair (leak, choke, tap)	Hours	45–55%	15–25%	Urgent repeat — speed, stock, reorder
Small install (WC, geyser, etc.)	~1 day	20–30%	15–20%	Same
Phased reno (bath, kitchen)	3–30 days	15–25%	35–45%	Job-phase kit (later cohort)
Large multi-trade project	Weeks+	5–10%	25–40%	Dealers / B2B

Contractor mix (urban): ~50–65% mostly **new site / new job daily**; **~10–20%** mostly multi-day sites. **Largest segment by headcount and trips = daily urgent work** → Part 1 feature pivot to **urgent repeat**, not phase-only.

Metric caveat: “No 2nd order in 14 days” blends (i) different site next time, (ii) dealer repeat, (iii) catalog miss, (iv) no need yet — segment **multi-SKU / same-site** for phase features; use **orders per contractor per week** for urgent cohort.

4. Channel — hardware dealers, not grocery kiranas

Channel	Role in materials
Hardware shop / building-materials dealer / wholesaler	Default for repeat: spec advice, udhaar , returns, WhatsApp order (“same as last time + 1 elbow”). Primary competitor for Fixxly repeat.

| **Quick-commerce (HomeRun)** | **2000+ SKUs**, 60–120 min, 105+ Bangalore pincodes — browse-first “store to site.” |

| **Fixxly** | **30 min**, thin dark-store, contractor app — win **urgent trip + trust**, not catalog breadth. |

5. Competitor snapshot — HomeRun

- **Promise:** 60–120 min delivery; 8am–8pm; pay on delivery; no minimum order ([HomeRun](#), [FAQ](#)).
- **Assortment:** Cement, ply, electrical, plumbing, hardware, paint — long tail.
- **Fixxly wedge:** Faster (**30 min**) + **trade-first reorder** on in-stock staples; don’t compete on SKU count at 60 OPD.

6. Ranked retention hypotheses (v2, abbreviated)

1. **Repeat ritual owned by hardware dealer** (WhatsApp / call / credit) — Fixxly wins trial, not share of wallet.
2. **Order-2 SKU not on dark store** — silent churn (search → exit).
3. **First delivery trust break** (OTIF / damage) — subset, ops-dependent.
4. **Week-1 cohort noise** (promo / one-off / non-contractor).
5. **No material need in 14d** — timing, not churn.

Part 1 bet: #1 + #2 for addressable gap; **urgent repeat** attacks #1 for largest cohort; stock truth attacks #2.

7. Implications for Part 1 submission

Decision	Rationale
Hero feature → Bill Banayein	New job → client bill → Fixxly lines + dealer split
Table stakes	Browse / cart / urgent order (default home)
Agla Phase / reorder	Later cohort
Pre-launch validation	15 interviews: payer, sites/week, order-2 channel; HomeRun mystery shop for SKU gaps
30-day metrics	Orders/contractor/week, reorder <7d, search-no-order, OTIF — not D14 alone
